

Nasaleaze

Abstract

Applicant has an idea that the healing powers of combining available "over the counter" medicines Neomycin, Polymyxin B Sulfates and Bacitracin Zinc first aid antibiotic ointment, and Hydrocortizone anti itch ointment produces a medicine named "Nazalease". When inserted into the nasal cavity, "Nazalease" is capable of treating unwanted nasal deposits. The proposed medication named "Nasaleaze" consists of 50% of Neomycin, Polymyxin B Sulfates and Bacitracin Zinc including inactive ingredients as described in U S Patent No. 5,652,274 and White Petrolatum or any other generic medication consisting of the same parameters and 50% of 1% Hydrocortizone and White Petrolatum or any other generic medication consisting of the same parameters. The composition applied in amounts equaling the size of q-tip head to the inside of the nostrils and spread around by gently squeezing nostrils. "Nasaleaze" proposed use: by adults and children 2 years of age and older.
